TECHNICAL SKILLS

LANGUAGES

JavaScript · Python · Dart · PHP · Java · SQL

FRONTEND

React.js · Next.js · Vite · Tailwind CSS ·
HTML5 · CSS3 · Responsive & PWA

BACKEND

Node.js · Express.js · FastAPI · Laravel ·
Spring Boot · REST APIs · JWT

DATABASES

MySQL · MongoDB · SQLAlchemy · Schema
& query design

AI / COMPUTER VISION

OpenCV · YuNet · SFace · MediaPipe ·
TensorFlow · Face recognition · Identity
verification

DEVOPS & TOOLS

Linux / Ubuntu · Docker · Docker Compose ·
VPS deployment · Git & GitHub · Postman

MOBILE & OTHER

Flutter · Dart · Solidity & smart contracts

CERTIFICATIONS

- Python Programming — University of Cambridge (UK)
- Node.js Developer — Simple Learning
- Solidity & Blockchain Development — Rise In
- Flutter App Development — Great Learning
- Blockchain Technology — Authena
- Cybersecurity & Secure Coding — Cyberu

EDUCATION

Advanced Level — Computer Science
Gikonko Technical Secondary School

Ordinary Level
Ecole des Sciences, Musanze

LANGUAGES

Kinyarwanda — Native
English — Professional working
French — Basic

PROFILE

Full-stack software engineer with 3+ years building and deploying production web applications and institutional systems. Specialised in education technology — school ERP platforms spanning student administration, attendance, assessments, fees and reporting — and in applied computer vision for automated attendance. Comfortable across the full lifecycle, from requirements and database design through to Docker-based deployment on Linux VPS environments.

PROFESSIONAL EXPERIENCE

Full-Stack Software Developer

BMCL Isomero Iwacu — Smart School ERP — August 2026 – Present

- Platform ownership** — built and maintained a comprehensive school management platform covering student administration, attendance, assessments, fees, report cards, parent-facing workflows and institutional reporting.
- Computer-vision attendance** — designed and implemented a webcam-based attendance system using face detection and recognition, replacing manual roll-call for both students and teachers.
- Recognition reliability** — developed identity-stability mechanisms that reduced false and flickering matches, and optimised the vision pipeline for faster recognition on modest hardware.
- Business logic** — implemented configurable time-slot attendance rules and integrated lateness deductions directly into payroll-related financial workflows.
- Assessments & reporting** — built assessments supporting multiple question types with automated marking, plus report-card generation and exports for administrative and financial reporting.
- Deployment** — containerised the system with Docker Compose and deployed it to a Linux VPS, handling environment configuration and ongoing maintenance.

Backend Developer Intern

CodeAlpha — March 2025

- Built backend services with Node.js, Express and MySQL — secure API design, database integration, authentication and role-based access control, tested with Postman.

SELECTED PROJECTS

Smart School Management & LMS Platform · React · Node.js · MySQL

- Student records, exam tracking, class ranking, fees, parent workflows and LMS features, with English / Kinyarwanda localisation.

Igifu Meals — Campus Meal Management · System design · Digital payments

- Meal-management system for campus restaurants using digital meal cards and flexible wallet payments, replacing manual handling end to end.

Virtual Science Laboratory · EdTech · Interactive simulation

- Interactive Chemistry, Physics and Biology experiments for schools without adequate laboratory equipment.

Stock Inventory Management System (SIMS) · Node.js · MySQL · MongoDB

- APIs for spare-part inventory, stock entry/exit logging and admin control, with a MongoDB variant for larger catalogues.

Parking Slot & Space Management System (PSSMS) · MERN stack

- Slot availability, vehicle check-in/check-out, parking records and payment tracking.

Task Management API · Node.js · Express · MySQL

- Backend service with user authentication, task lifecycle management and role-based access control.
